

**REMARKS/ARGUMENTS**

**Rejection of claims 1, 5, 13 and 16-21 under 35 U.S.C 103(a) as being  
unpatentable over Applicant's admitted prior art (APA), figures 1-2, in view  
5 of Sato, US 2006/0097380.**

Claims 1 and 13 of the present invention recite a liquid crystal display  
module having a glass substrate and at least a driver chip (such as a gate driver  
chip or a source driver chip) mounted on the periphery of the glass substrate, in  
10 which the thickness of the driver chip is preferably fabricated less than 0.3 mm.

Despite Sato may have disclosed driver chips that are also 0.3 mm or less,  
the purpose for fabricating driver chips of such thickness is significantly different  
from that of the present invention. Sato in paragraph [0067] of the cited  
15 reference clearly states that the "heat sink 53 becomes protuberant above the  
driver IC chip 9, and to avoid this, the driver IC chip 9 is thinly polished or  
buffed". Therefore, the IC chip 9 disclosed in Sato's invention is specifically  
thinned to provide a plane surface.

20 In contrast to Sato, the driver chip of the present invention is thinned to  
reduce the stress created between the chip and the glass substrate. Moreover, the  
process to thin the driver chip cannot be accomplished by typical IC fabrication  
processes. Instead, a series of polishing processes is conducted to achieve a  
desired thickness and such technique is not commonly found in the conventional  
25 art.

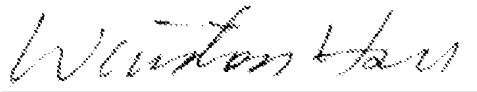

Most of all, applicants submit that Sato does not teach, suggest, or in any  
way provide proper motivation to fabricate a semiconductor module that those  
skilled in the art would find it reasonable to combine with the liquid crystal  
30 module disclosed by the admitted prior art of the present invention, in which the  
liquid crystal module is specifically fabricated for relieving stress between IC chip

and glass substrate thereby reducing curtain mura between these two units.

As these features are clearly absent in Sato's invention, applicants submit that the liquid crystal display module of the present invention is patentable over the combined teaching of Sato and the admitted prior art of the present invention. Reconsideration of claims 1 and 13 is respectfully requested. As claims 5 and 16-21 are dependent upon claims 1 and 13, applicant asserts that if claims 1 and 13 are found allowable, claims 5 and 16-21 should additionally be found allowable.

Applicant respectfully requests that a timely Notice of Allowance be issued in this case.

Sincerely yours,

Date: 07/03/2008
